

Table A-2.

Households by Total Money Income, Race, and Hispanic Origin of Householder: 1967 to 2018

(Income in 2018 CPI-U-RS adjusted dollars. Households as of March of the following year. Beginning with 2010, standard errors were calculated using replicate information on confidentiality protection, sampling error, nonsampling error, and definitions, <<https://www2.census.gov/programs-surveys/cps/techdoc>

ALL RACES

Race and Hispanic origin of householder and year	Number (thousands)	Percent distribution						
		Total	Under \$15,000	\$15,000 to \$24,999	\$25,000 to \$34,999	\$35,000 to \$49,999	\$50,000 to \$74,999	\$75,000 to \$99,999

N Not available.

¹ Implementation of an updated CPS ASEC processing system.

² The 2014 CPS ASEC included redesigned questions for income and health insurance coverage. All of the approximately 98,000 addresses were eligible to be implemented to a subsample of the 98,000 addresses using a probability split panel design. Approximately 68,000 addresses were eligible to receive a set of redesigned income questions. The source of these 2013 estimates is the portion of the CPS ASEC sample that received the redesigned income questions.

³ The source of these 2013 estimates is the portion of the CPS ASEC sample that received the income questions consistent with the 2013 CPS ASEC, appropriate to the 2013 CPS ASEC.

⁴ Implementation of 2010 Census-based population controls.

⁵ Medians are calculated using \$2,500 income intervals. Beginning with 2009 income data, the Census Bureau expanded the upper income intervals used to "\$250,000." Before 2009, the upper open-ended interval was \$100,000 and a plug of "\$100,000" was used.

⁶ The 2004 data have been revised to reflect a correction to the weights in the 2005 CPS ASEC.

⁷ Implementation of a 28,000 household sample expansion.

⁸ Implementation of 2000 Census-based population controls.

⁹ Full implementation of 1990 Census-based sample design and metropolitan definitions, 7,000 household sample reduction, and revised editing of responses.

¹⁰ Introduction of 1990 Census sample design.

¹¹ Data collection method changed from paper and pencil to computer-assisted interviewing. In addition, the 1994 CPS ASEC was revised to allow for the following categories: earnings limits increased to \$999,999; social security limits increased to \$49,999; supplemental security income and public assistance limits decreased to \$49,999.

¹² Implementation of 1990 Census population controls.

¹³ Implementation of a new CPS ASEC processing system.

¹⁴ Recording of amounts for earnings from longest job increased to \$299,999. Full implementation of 1980 Census-based sample design.

¹⁵ Implementation of Hispanic population weighting controls and introduction of 1980 Census-based sample design.

¹⁶ Implementation of 1980 Census population controls. Questionnaire expanded to show 27 possible values from 51 possible sources of income.

¹⁷ First year medians were derived using both Pareto and linear interpolation. Before this year, all medians were derived using linear interpolation.

¹⁸ Some of these estimates were derived using Pareto interpolation and may differ from published data, which were derived using linear interpolation.

¹⁹ Implementation of a new CPS ASEC processing system. Questionnaire expanded to ask 11 income questions.

²⁰ Full implementation of 1970 Census-based sample design.

²¹ Introduction of 1970 Census sample design and population controls.

²² Implementation of a new CPS ASEC processing system.

²³ Beginning with the 2003 CPS ASEC, respondents were allowed to choose one or more races. White alone refers to people who reported White and did not report any other race category. This is the preferred method of presenting or analyzing the data. The Census Bureau uses a variety of approaches. Information on people who reported more than one race is available from the 2010 Census through American FactFinder. About 2.9 percent of people reported more than one race in the 2010 Census.

²⁴ For the year 2001 and earlier, the CPS ASEC allowed respondents to report only one race group.

²⁵ Black alone refers to people who reported Black and did not report any other race category.

²⁶ Asian alone refers to people who reported Asian and did not report any other race category.

²⁷ Because Hispanics may be any race, data in this report for Hispanics overlap with data for racial groups. Being Hispanic was reported by 15.7 percent of White householders who reported only one race, and 2.0 percent of Asian householders who reported only one race. Data users should exercise caution when interpreting aggregate results for the Hispanic population in socioeconomic characteristics, culture, and recency of immigration. Data were first collected for Hispanics in 1972.

Note: Inflation-adjusted estimates may differ slightly from other published data due to rounding.
